UID Experiment 4

NAME: SHEIK NOORDEEN **ROLL NO.:** 240701494

Introduction

I developed a prototype using Proto.io to incorporate both familiar and novel navigation elements, aiming to evaluate usability among diverse user groups. The prototype consists of three key screens: the Login Page, Home Page, and Profile Page. My goal was to create a user-friendly experience while also introducing new navigation techniques to enhance usability.

Prototype Screens

The following images show the developed prototype screens:

Apple iPhone 17 Pro Max
Product Name: iPhone 17 Pro Max
Tagline: Built for Apple Intelligence
Status: In Stock | Fast Delivery Available
PRICE & STORAGE OPTIONS
The iPhone 17 Pro Max is available in several storage configurations, starting at 256GB. In India, current market prices are around:
256GB: ₹1,49,900
512GB: ₹1,69,900
1TB: ₹1,89,900
2TB: ₹2,29,900

Familiar and Unfamiliar Navigation in UI/UX Design

Familiar Navigation

Familiar Navigation refers to design elements and interaction patterns that users commonly encounter in applications and websites. These elements are intuitive, predictable, and require little to no learning curve.

- Examples:
- Search bar
- Navigation bar
- Edit & Save button
- Login & Logout button

Unfamiliar Navigation

Unfamiliar Navigation includes novel, experimental, or unconventional elements that may not be immediately intuitive to users. These can improve usability if designed effectively but may require user adaptation.

- Examples:
- Gesture-based navigation
- Scrolling effects
- Hidden menu

Screen Descriptions

1. Login Page

The Login Page includes traditional username and password fields for authentication. A Login button is positioned below the input fields, following standard application design patterns. This ensures users can easily understand and complete the authentication process.

- Familiar Elements:
- Username field
- Password field
- Login button

2. Home Page

The Home Page displays main content and provides navigation to other sections of the application. Users can scroll to explore content in an organized layout.

- Familiar Elements:
- Navigation bar
- Scrollable content layout
- Unfamiliar Elements:
- Dynamic content loading on scroll

- Parallax scrolling effects

3. Profile Page

The Profile Page allows users to view and edit their personal information. An Edit Profile button enables users to update details easily.

- Familiar Elements:
- Edit Profile button
- Save option after editing
- Unfamiliar Elements:
- Profile completion progress bar (Gamification)

Conclusion

The prototype successfully integrates both familiar and unfamiliar navigation elements. Familiar components ensure ease of use, while unfamiliar elements introduce innovation and engagement. This balance enhances overall usability and user experience.
