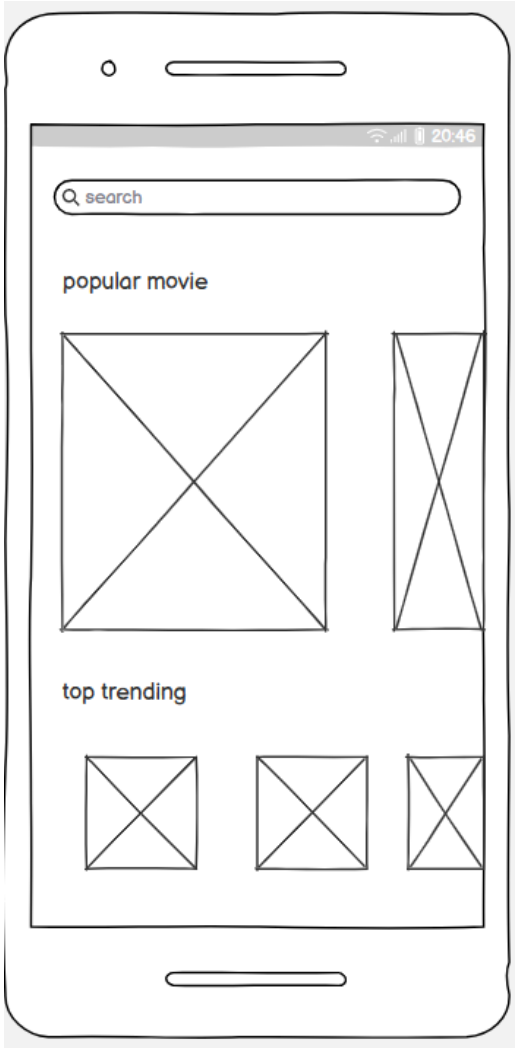
# MOVIE TICKET BOOKING APP

Name: Sheik Noordeen

Roll no: 240701494

This document explains the storyboard and user flow of a movie ticket booking application designed using basic UI/UX .

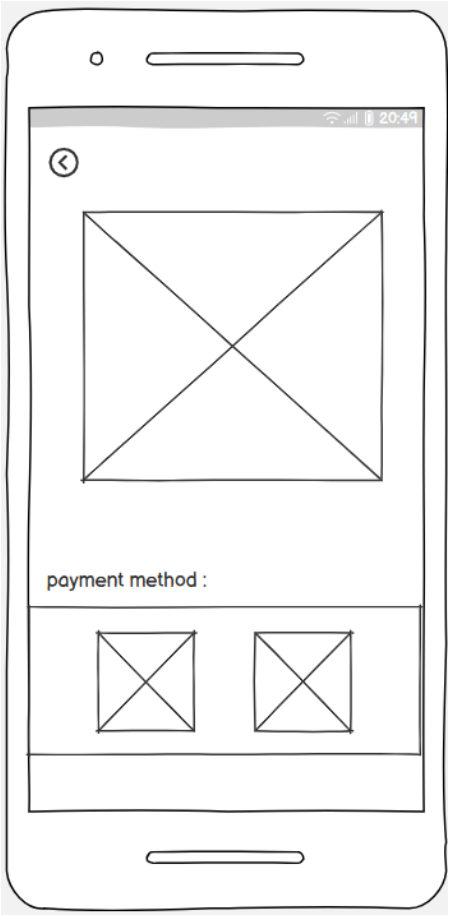
## HOME SCREEN



This is the home screen of the application. It includes:
- A search bar to find movies easily.
- A 'Popular Movies' section to highlight trending or featured films.

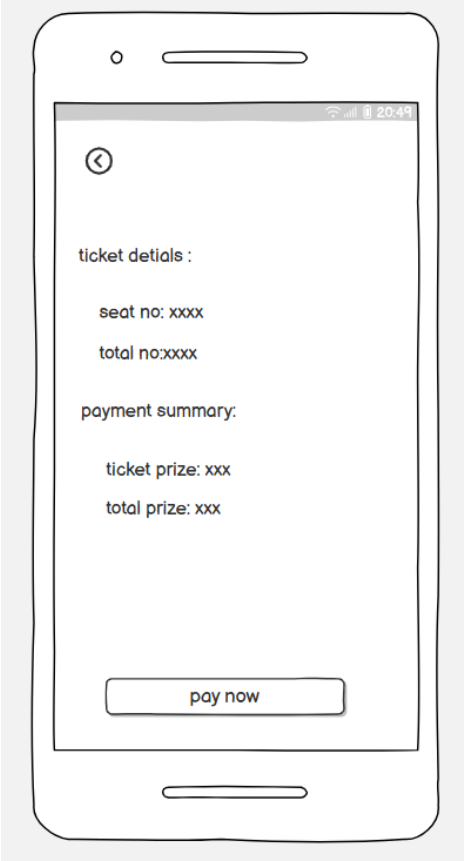
- A 'Top Trending' section that showcases currently popular movies.
This screen helps users quickly discover content and improves navigation efficiency.

## Movie Selection & Payment Method



This screen shows the selected movie with available payment options.
- A large preview area displays the selected movie.
- Users can go back using the navigation icon.
- Multiple payment methods are shown for flexibility.
This stage allows users to choose how they want to pay before proceeding.

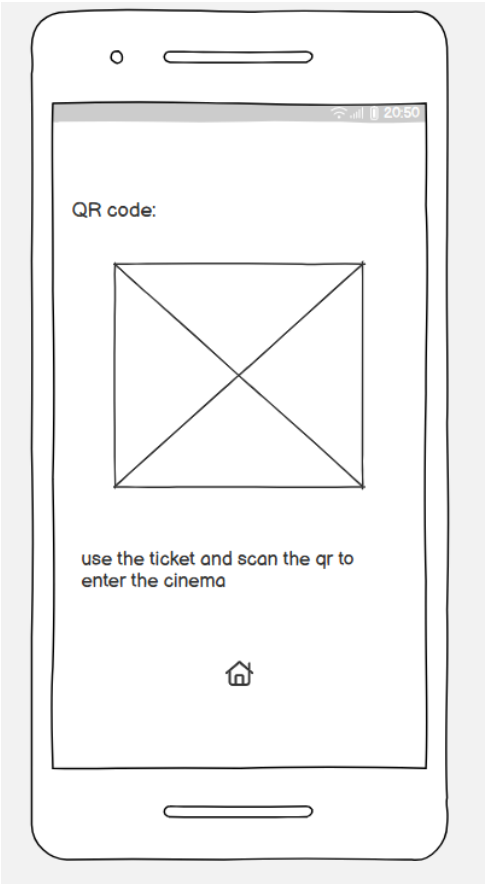
## Ticket Details & Payment Summary



This screen provides a clear breakdown of booking details.
- Seat number and number of tickets are displayed.
- Payment summary includes ticket price and total cost.
- A 'Pay Now' button allows users to complete the transaction.

This ensures transparency and helps users verify their booking before payment.

## QR Code Ticket Screen



This is the final confirmation screen.
- A QR code is generated for ticket validation.
- Instructions guide the user to scan the QR code at the cinema.
- A home icon allows users to return to the main screen.

This screen completes the user journey and acts as the digital ticket.
